

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): An electrically conductive thermoplastic resin composition to which an electrically conductive agent is added, ~~characterized in that~~wherein a base resin contains a polyester resin and a filler consisting of at least one whisker, and the amount of the filler admixed is 10 to 50 parts by weight with respect to 100 parts by weight of the resin.

2. (original): The electrically conductive resin composition according to claim 1, wherein the electrically conductive resin composition has the water absorption factor of less than 1.0 % which is measured in conformity with ASTM D-570 when the composition is left standing for 24 hours in an environment of the temperature of 50°C and the relative humidity of 90 %.

3. (currently amended): The electrically conductive resin composition according to claim 1, wherein the polyester resin is selected from a group consisting of polybutylene terephthalate, polyethylene terephthalate and, or polyethylene naphthalate.

4.-5. (canceled).

6. (currently amended): The electrically conductive resin composition according to ~~claim 4~~claim 1, wherein the filler is fibrous calcium silicate.

7. (previously presented): A resinous base-body for a photosensitive drum used in electrostatic recording processes, wherein the resinous base-body is made of the electrically conductive resin composition according to claim 1.

8. (original): A photoconductive drum comprising a photoconductive layer on the resinous base-body for the photosensitive drum according to claim 7.
